ApnoMart Executive Insights

Sales & Profitability Analysis | Prepared by Pavan | October 2026

Analysis period: 1 May 2026 – 28 October 2026

Period note: The assignment requests the title “ApnoMart Q2 2026 Executive Dashboard,” but the provided dataset spans May through October 2026. Do not describe the entire period as Q2-only performance.

KPI Summary

Total Sales: ■1,62,61,998.30
Total Profit: ■44,19,736.17
Unique Orders: 1,200
Overall Profit Margin: 27.18% (total profit ÷ total sales)

Insight 1 — Revenue Pattern

Finding: Furniture is the highest-revenue category, generating ■35.18 lakh, approximately 21.63% of total sales. July is the strongest month, with ■29.58 lakh in sales.

So what: Review the products, campaigns, and order patterns that contributed to July's performance. Use validated demand trends to guide inventory and marketing plans, rather than assuming the peak will automatically repeat.

Insight 2 — Profitability Pattern

Finding: Office Supplies has the highest category profit margin at approximately 34.80%. Electronics has the lowest category margin at approximately 18.88%, despite generating ■29.58 lakh in sales.

So what: Investigate Electronics discount levels, product mix, supplier costs, and returns or other relevant costs. Test targeted changes and measure their effect on profit before applying broad discount reductions.

Insight 3 — Customer and Payment Behavior

Finding: Corporate customers contribute ■43.11 lakh, about 26.51% of total sales, the largest customer-segment share. Cash is the largest payment method by sales at ■35.74 lakh, about 21.98%.

So what: Evaluate retention opportunities for Corporate customers and examine payment-method preferences by customer segment and region. Use the findings to test focused campaigns rather than assuming payment choice alone causes customer behavior.

Strategic Recommendation for Next Quarter

Prioritize profitable growth. Protect the strong margins in Office Supplies, investigate the drivers of Electronics' lower margin, and use monthly and customer-segment trends to guide inventory and marketing budgets. Run controlled tests for discount or campaign changes, tracking both revenue and profit before scaling.

Methodology and caveats

Figures are calculated from the supplied CSV. Overall profit margin is total profit divided by total sales. Category margin is category profit divided by category sales. Sales shares use total sales as the denominator. These are descriptive findings; they do not prove why a trend occurred or guarantee future performance.
